

# PRESS RELEASE

FOR RELEASE: 28<sup>th</sup> January 2022

## iLink certified with apaleo

**Integration brings connectivity to hundreds of hotel applications for the most flexible Property Management System.**

TigerTMS announces certification with apaleo – the widely used API-first property management app. The iLink – apaleo integration offers connection to hundreds of hotel applications with minimal effort to provide increased efficiencies across the hotel.

This latest integration brings another level of interface options for the hospitality sector, extending the reach of TigerTMS' iLink middleware solution to the cloud-native platform. The integration is available on the apaleo Store and is listed under the many categories, supporting the integration between:

- Telephony
- WiFi
- TV systems
- Housekeeping
- Maintenance
- Wake Up
- Conference
- Minibar
- BYOD
- Guest Services
- Emergency Notification
- Room control
- Voicemail
- Butler
- And more...

“In this exciting new connection, apaleo and Tiger TMS are extending the reach of our property management application to properties utilizing the advanced middleware iLink.” Uli Pillau, cofounder of apaleo continues, “Legacy PMSs traditionally sit in the middle of a hotel’s tech stack and act as the gatekeeper of data to be spread across every system - but apaleo isn’t your traditional PMS - instead, it acts as the platform for apps to do what they do best and for middleware solutions to connect to all of existing systems in place”

John Owen, CEO TigerTMS, adds: “Integrating to an open API cloud PMS platform is a new milestone for us to reach. It has been refreshing to work with a forward-thinking company that is in tune with the hospitality sector to deliver cloud-based property management functionality, providing hoteliers with a wide choice of applications to facilitate providing the best possible service to their guests.”
